

CCDC Inject

INJECT NAME	38 Configure centralized log forwarding
INJECT ID	LOG01

INJECT DESCRIPTION:

If a host is compromised, locally stored logs can be altered or deleted by an attacker to cover their tracks. It's essential that critical systems forward their logs off-host to a central location.

Provide the output showing your current logging configuration (e.g. the relevant "rsyslog" or "syslog-ng" configuration) and your plan to forward logs from each host to a central logging server if this is not already in place.
