

CCDC Inject

INJECT NAME	39 Assess and harden Remote Desktop Protocol (RDP) configuration
INJECT ID	RDP01

INJECT DESCRIPTION:

We need to confirm that Remote Desktop access to our Windows hosts is configured securely. Following recent security events, it's essential that RDP is restricted to only what's required and enforces strong authentication.

Provide the output showing your current RDP configuration (e.g. "Get-NetFirewallRule -DisplayGroup 'Remote Desktop'" and whether Network Level Authentication is enabled) and your plan to harden RDP access (restrict source addresses, enforce NLA, or disable it where not required) if it is not already configured securely.
