

CCDC Inject

INJECT NAME	40 Assess and configure Windows Defender Firewall
INJECT ID	WINFW01

INJECT DESCRIPTION:

We need to validate that Windows Defender Firewall is enabled on every profile and only allows the inbound connections each host actually requires.

Provide the output from "Get-NetFirewallProfile" and "Get-NetFirewallRule -Enabled True -Direction Inbound" and your plan to enable the firewall on all profiles and remove or restrict any unnecessary inbound rules if needed.
