

CCDC Inject

INJECT NAME	41 Configure centralized Windows Event Log forwarding
INJECT ID	WINLOG01

INJECT DESCRIPTION:

If a host is compromised, local Windows Event Logs can be cleared or tampered with by an attacker to cover their tracks. It's essential that critical systems forward their security events to a central collector.

Provide the output showing your current event log forwarding or subscription status (e.g. "wecutil gs " or your Windows Event Forwarding subscription configuration) and your plan to configure forwarding of key event logs to a central log collector if this is not already in place.
