

CCDC Inject

INJECT NAME	43 Assess and configure PAN-OS log forwarding
INJECT ID	PANOS02

INJECT DESCRIPTION:

If the firewall is compromised or its local logs are lost, we lose critical visibility into traffic and threats. It's essential that logs are also forwarded off-box to a central SIEM or Panorama in real time.

Provide the output showing your current log forwarding configuration (e.g. via the CLI with "show log-settings" or the Objects > Log Forwarding and Device > Server Profiles sections of the web UI) and your plan to configure log forwarding for traffic, threat, and system logs to a central collector if this is not already in place.
