

CCDC Inject

INJECT NAME	44 Assess and plan operating system patch updates
INJECT ID	PATCH01

INJECT DESCRIPTION:

We need to validate whether our Linux hosts are missing critical security patches. Following recent security events, it's essential that all systems are kept up to date.

Provide the output from "uname -a" and "apt list --upgradable" (or "yum check-update" / "dnf check-update", depending on your distribution) and your plan to apply any outstanding security patches if necessary.
