

CCDC Inject

INJECT NAME	48 Assess and plan PAN-OS software and content updates
INJECT ID	PANOS03

INJECT DESCRIPTION:

We need to validate whether the PAN-OS firewall is running a vulnerable or end-of-life PAN-OS release, or outdated Applications and Threats content, given recent security advisories.

Provide the output from "show system info" (or Device > Software and Device > Dynamic Updates in the web UI) showing your current PAN-OS and content versions, and your plan to upgrade to a currently supported PAN-OS release and update the Applications and Threats content if necessary.
