|--------------------|----------------------------------------------|
| <b>INJECT NAME</b> | 49 Audit and harden PAN-OS management access |
| <b>INJECT ID</b>   | PANOS04                                      |

## INJECT DESCRIPTION:

We need to confirm that access to the PAN-OS management interface is restricted to authorized administrators over secure protocols only.

Provide the output showing your current management interface settings and administrator accounts (e.g. via the CLI with "show admins" and the management interface configuration, or Device > Setup > Management and Device > Administrators in the web UI) and your plan to restrict permitted management source IP addresses, disable insecure services such as Telnet and HTTP, and review administrator accounts and privilege levels if needed.
